After the Ice - A Global Human History 20,000 - 5,000 BC

20,000 BC, the peak of the last ice age—the atmosphere is heavy with dust, deserts, and glaciers span vast regions, and people, if they survive at all, exist in small, mobile groups, facing the threat of extinction. But these people live on the brink of seismic change—10,000 years of climate shifts culminating in abrupt global warming that will usher in a fundamentally changed human world.

After the Ice — Steven Mithen | Harvard University Press

In After the Ice, Steven Mithen gives us an exhaustive tour of the postglacial prehistoric world. He uses a fictional tour guide who travels like a ghost through time and over extensive geography to help us envision the numerous archaeological sites as they looked and felt when they were occupied by our Stone Age ancestors.

Amazon.com: Customer reviews: After the Ice: A Global ...

This huge volume of ice lowered global sea level by around 120 meters as compared to today. After the ice sheets began to melt and retreat, sea level rose rapidly, with several periods of even faster spurts. The first such spurt may have started about 19,000 years ago, at which time ocean levels rose 10-15 m in less than 500 years.

NASA GISS: Science Briefs: Sea Level Rise, After the Ice ...

As the Earth moved out of ice ages over the past million years, the global temperature rose a total

of 4 to 7 degrees Celsius over about 5,000 years. In the past century alone, the temperature has climbed 0.7 degrees Celsius, roughly ten times faster than the average rate of ice-age-recovery warming.

Global Warming - NASA

Comparing the global set of temperature records with the levels of CO₂ in the ancient air bubbles trapped in ice cores reveals that global average temperatures started to rise at least a century...

What Thawed the Last Ice Age? - Scientific American

Part history, part science, part time travel, "After the Ice" offers an evocative and uniquely compelling portrayal of diverse cultures, lives, and landscapes that laid the foundations of the modern world.

1) After the Ice: A Global Human read and download epub ...

Twenty thousand years ago Earth was in the midst of an ice age. Then global warming arrived, leading to massive floods, the spread of forests and the retreat of the deserts. By 5,000 BC a radically different human world had appeared. In place of hunters and gatherers there were farmers; in place of transient campsites there were towns.

At the height of the last ice age, there were an estimated 10 million cubic miles of ice covering the planet. During this glacial period, global sea levels were an estimated 400 feet lower than they are today. In modern terms, the landmass we know as Canada was buried under ice as dense as two miles thick. So what happened to the ice?

Evidence of Global Warming & The End of the Last Ice Age

Sea ice is frozen ocean water that melts each summer, then refreezes each winter. The amount of summer sea ice in the Arctic has been steadily shrinking over the past few decades because of global ...

Global warming: Summer Arctic sea ice will be gone by 2050

So evidence indicates that after the Flood, volcanic eruptions would have been able to replenish the stratospheric dust and gases and sustain the cooling. Since the eruptions were more or less random as the earth gradually settled down after the global Flood, volcanism would show peaks and lulls within a pattern of gradual decline (figure 7.3).
