A bull put spread is an options strategy that an investor uses when they expect a moderate rise in the price of the underlying asset. The strategy employs two put options to form a range,...

Bull Put Spread Definition - investopedia.com

A bull put spread consists of one short put with a higher strike price and one long put with a lower strike price. Both puts have the same underlying stock and the same expiration date. A bull put spread is established for a net credit (or net amount received) and profits from either a rising stock price or from time erosion or from both.

Bull Put Spread - Fidelity

A bull put spread involves purchasing out-of-the-money (OTM) put option and selling an in-the-money (ITM) put option with a higher strike price. The strike price is the price at which the holder of the option can exercise the option to buy or sell an underlying security, depending on but with the same underlying asset and expiration date. A bull put spread should only be used when the market is exhibiting an upward trend.

Bull Put Spread - Overview, How It Works, Example

Bull put spreads are a bullish options strategy. They consist of selling a higher striking in-the-money (ITM) and buying a lower striking out-of-the-money (OTM) thus creating a net credit. If price stays above short strike by expiration then you collect the premium. Options are popular because they allow you to make money in any market.

Bull Put Spreads - How to Trade a Bull Put Spread Profitably

Normally in a bull put spread, the investor wants to benefit from the range bound or rising stock but with more protection than a simple put selling strategy. As a financial investment strategy it is far more conservative than put selling and while less profitable it can still be a profitable option strategy for income.

Bull Put Spread Explained | FullyInformed.com

A bull put spread is an options strategy that consists of selling a put option while also buying a put option at a lower strike price. Both options must be in the same expiration cycle. Additionally, each strike should have the same number of contracts (i.e. if selling two puts, two puts at a lower strike should be bought).
