drawing on past political, historical, and market principles. They explain how the Fed arrived at its current position, offer ideas on how to exit the situation, and propose new market-based reforms that can help keep the Fed on the road to good monetary policy in the future.

Economic methodology typically focuses on microeconomic theory. The Methodology of Empirical Macroeconomics breaks new ground by focusing instead on the genuine problems that arise for macroeconomists trying to relate theory to data. It demonstrates that with careful attention to actual macroeconomic practice, economic methodology and the philosophy of science help to resolve problems faced by working macroeconomists. Some issues addressed are: the relationship between theoretical models and empirical observations; microfoundations for macroeconomics; the scope and nature of economic laws, the role of idealizations, methodological individualism, and the problem of causality.

Capital theory and dynamics are cornerstones for almost every branch of economics. Except in a fictional world where the economies of yesterday, today, and tomorrow are identical, issues of capital formation and dynamic behaviour must always arise. Although the specialist literature is technically demanding, Professor Burmeister shows that its important results can be understood and their economic significance grasped by those who do not possess the "mathematical literacy" required to follow rigorous proofs. Even if future events are known with certainty, they still influence the current economic state. This is the pure role of time. That future events are not known with certainty adds another complexity. This book focuses mainly on the pure

role of time.

Each chapter of the Active Learning Guide includes a "Speaking Economics" section that reviews key terms, a set of "Chapter Highlights" that tests important conclusions from the text, and an "Important Concepts" section that reviews the central ideas of the chapter. Answers are provided for all questions.

This proven author team focuses on core theoretical ideas and presents a systematic application of theoretical tools to real-world domestic and global issues, teaching students how to use analytical processes to develop and sharpen their own economic analysis skills. In addition, the book's innovative Aplia homework management solution provides the most integrated text and homework management system available.

An advanced treatment of modern macroeconomics,

presented through a sequence of dynamic equilibrium models, with discussion of the implications for monetary and fiscal policy. This textbook offers an advanced treatment of modern macroeconomics, presented through a sequence of dynamic general equilibrium models based on intertemporal optimization on the part of economic agents. The book treats macroeconomics as applied and policy-oriented general equilibrium analysis, examining a number of models, each of which is suitable for investigating specific issues but may be unsuitable for others. After presenting a brief survey of the evolution of macroeconomics and the key facts about long-run economic growth and aggregate fluctuations, the book introduces the main elements of the intertemporal approach through a series of two-period competitive general equilibrium models—the simplest possible intertemporal models. This sets the stage for the remainder of the book, which presents models of economic growth, aggregate fluctuations, and monetary and fiscal policy. The text focuses on a full analysis of a limited number of key intertemporal models, which are stripped down to essentials so that students can focus on the dynamic properties of the models. Exercises encourage students to try their hands at solving versions of the dynamic models that define modern macroeconomics. Appendixes review the main mathematical techniques needed to analyze optimizing dynamic macroeconomic models. The book is suitable for advanced undergraduate and graduate students who have some knowledge of economic theory and mathematics for economists.
