This practical guide offers mental health professionals a detailed, step-by-step description on how to conduct Parent-Child Interaction Therapy (PCIT) - the empirically validated training program for parents with children who have disruptive behavior problems. It includes several illustrative examples and vignettes as well as an appendix with assessment instruments to help parents to conduct PCIT.

PUBLIC ABSTRACT: Intervention programs providing support for father parenting skills need a practical but psychometrically strong observational measure of fathers' early positive parenting interactions with children. The primary purpose of this project was to develop a valid, reliable observational measure of father-child interaction, based on research and theory, that predicts child outcomes, identifies fathers' strengths, and will be useful for home visiting practitioners. This study sought to fulfill this need by developing a new measure called Dads' Parenting Interactions with Children - Checklist of Observations Linked to Outcomes (PICCOLO-D) for home visitors to use to identify fathering strengths. Developed with extant video observations of over 400 ethnically diverse, low-income fathers, 73 positive observable behavioral items of early positive father-child interaction were tested for variability, reliability, and validity. The final measure of 21 items representing four domains of positive parenting, affection, responsiveness, encouragement, and teaching, demonstrated good reliability and validity, including associations with children's language, cognitive, and social emotional outcomes into prekindergarten. Contextual influences were examined within father ethnicity and child gender groups and in a second observational setting. European and Latino American fathers had higher scores than African American fathers. Fathers had higher scores with daughters than sons. Fathers had higher scores in a semistructured play setting than in a father-choice setting. The new measure is intended for use as part of an individualized strengths-based approach for home visiting practitioners.

This manual is the highly recommended companion to CPRT: A 10-Session Filial Therapy Model. Accompanied by a CD-Rom of training materials, which allows for ease of reproduction and enhanced usability, the workbook will help the facilitator of the filial training and will provide a much needed educational outline to allow filial therapists to pass their knowledge on to parents. The Treatment Manual provides a comprehensive outline and detailed guidelines for each of the ten sessions, facilitating the training process for both the parents and the therapist. The book contains a designed structure for the therapy training described in the book, with child-centered play therapy principles and skills, such as reflective listening, recognizing and responding to children's feelings, therapeutic limit setting, building children's self-esteem, and structuring required weekly play sessions with their children using a special kit of selected toys. Bratton and her co-authors recommend teaching aids, course materials, and activities for each session, as well as worksheets for parents to complete between sessions. By using this workbook and CD-Rom to accompany the CPRT book, filial therapy leaders will have a complete package for use in training parents to act as therapeutic agents with their own children. They provide the therapist with a complete package for training parents to act as therapeutic agents with their own children.

Make your everyday interactions with children intentional and purposeful with these steps: Be Present, Connect, and Extend Learning.

Decades of research have demonstrated that the parent-child dyad and the environment of the family are which includes all primary caregivers are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives, generate stress or calm, and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

Generating a broad, accurate portrait of the behaviors, attitudes, and skills of parents and children, this field-tested tool provides the data home visiting programs need to demonstrate effectiveness and receive funding.
