A vertical garden can run the gamut from a simple arrangement of flowers in a large container on a deck to an elaborate display of strawberries and geraniums amid climbing peas and vines of small squash growing up a backyard fence. Any upright structure that can support vegetables, fruits, herbs, or flowers, whether these plants are in containers or in the ground, can be used. Of particular interest to urban dwellers and to city residents with limited yard space or sunlight, growing plants vertically can also be used by suburban and rural gardeners so valuable ground space can be freed up for

root crops. This book offers a how to guide for the novice or professional vertical gardener. It fully explains which types of foliage, vegetables and fruits work best for a vertical garden and the level of maintenance required to sustain the garden of your dreams. The right choices mean easier maintenance, less need for herbicides and pesticides and a more attractive space. Details about the best location for a vertical garden are discussed, as well as how to plant in areas that offer environmental restrictions, such as decks or patios. A garden can block unattractive structures,

discovered it looking at pins on Pinterest, and I was immediately intrigued by the idea. When I started doing research, I discovered that vertical gardening means different things to different people. It can mean an outdoor vegetable garden where vining or sprawling plants are trained to grow up a trellis or other vertical structure. Or, it can mean growing plants in containers attached to an outdoor wall or other structure. Finally, it can mean growing plants in containers on a wall indoors. We will take a look at each of these types of gardens.

Vertical Gardening is the most revolutionary agricultural breakthrough in the last 100 years... and now you can be a part of it, too. A vertical garden is simply vertical gardening but it grows plants using vertical columns. This is a great way to grow plants that grow upwards and that grow downwards. This means that you grow food using only water and air. Did you know that a vertical garden can use 90% less water than a conventional garden? And it can produce up to 4 times as much food in the same amount of space as a conventional
