How Cool Are Penguins is a book that will introduce young children to the world of penguins. It is written and illustrated in a fun and informative way that will entertain both the young and the young at heart.

Water Management Challenges in Global Change contains the proceedings of the 9th Computing and Control for the Water Industry (CCW12007) and the Sustainable Urban Water Management (SUWM2007) conferences. The rationale behind these conferences is to improve the management of urban water systems through the development of computerbased methods. Issues such as economic globalisation, climate changes and water shortages call for a new approach to water systems management, which addresses the relevant technical, social and economic aspects. This collection represents the views of academic and industrial experts from a number of countries, who provide technical solutions to current water management problems and present a vision for addressing the global questions. The themes underlying many of the contributions include energy and material savings, water savings and the integration of different aspects of water management. The papers are grouped into three themes covering water distribution systems, sustainable urban water management and modelling of wastewater treatment plants. The water distribution topics cover asset and information management, planning, monitoring and control, hydraulic modelling of steady state and transients, water quality and treatment, demand and leakage management, optimisation, design and decision support systems, as well as reliability and security of water distribution systems. The sustainable urban water management topics include urban drainage systems, water reuse, social aspects of water management and also selected facets of water resources and irrigation. Computer control of wastewater treatment plants has been seen as less advanced than that of clean water systems. To address this imbalance, this book presents a number of modelling techniques developed specifically for these plants. Water Management Challenges in Global Change will prove to be invaluable to water and environmental engineering researchers and academics; managers, engineers and planners; and postgraduate students.

'The Sacred History' is an account of the workings of the supernatural in history. It tells the epic story of angels from creation to evolution, through to the operations of the supernatural in the modern world.

God created animals with everything they needed. To be content and succeed, He designed homes perfectly suited to each one. However, the animals were unhappy with the places that God had made for them and eventually gave into the insecurities and fears they all felt. Owl was frightened of the dark, Mountain Goat became faint-hearted as he looked down from the narrow mountain ledge. Duck panicked every time she neared the water. Camel detested the hot, dry wind and Penguin hated the icy cold. Through whimsical illustrations and creative prose, " God Gave Me Everything I Need To Be Me! " encourages self acceptance, individuality and appreciation as the animals finally realize God had given them exactly what each one required to make them complete.

In November 2011, an agreement brokered by the GCC brought an end to Yemen's tumultuous uprising. The National Dialogue Conference has opened a window of opportunity for change, bringing Yemen's main political forces together with groups that were politically marginalized. Yet, the risk of collapse is serious, and if Yemen is to remain a viable state, it must address numerous political, social and economic challenges. In this invaluable volume, experts with extensive Yemen experience provide innovative analysis of the country's major crises: centralized governance, the role of the military, ethnic conflict, separatism, Islamism, foreign intervention, water scarcity and economic development. This is essential reading for academi, journalists, development workers, diplomats, politicians and students alike. 'Essential reading ... The authors shed light on the context of the Yemeni uprising in a way that not only helps us understand the current transitional period but also the outlines of Yemen's future.' Charles Schmitz, President of the American Institute of Yemeni Studies 'An up to date and wide-ranging guide to what is arguably the Arab world's least known and most misunderstood state. Edited by one of Britain's foremost authorities on Yemen ... brings together an impressive range of experts on the country to examine the contemporary reality of Yemen.' Michael Willis, Director of the Middle East Centre, St Antony's College, Oxford University 'Thoughtful and well-researched, Why Yemen Matters unearths a wealth of information about contemporary Yemeni society.' Baghat Korany, Professor of International Relations, American University in Cairo

The popularity of The Seven Deadly Sins dates back to the 4th Century. They enjoyed tremendous notoriety during the period we call the Middle Ages. While the popular assortment of sins is not directly from scripture, they have been the subject of many a sermon, lecture, writing and art.In his book The Seven Deadly Sins: And Why We Love Them, Steinbacher examines each in detail. He gives examples of how they effect us and how we conduct ourselves in this world.Included in this book is Steinbacher's essay,An Angel In My Garden.
