How Engine Pollution Harms the Environment and Health. Carbon monoxide, nitrogen oxides, and hydrocarbons are released when fuel burns in an internal combustion engine. They may also be released when vehicle tailpipes emit air and fuel residuals. Gasoline vapors also escape into the atmosphere during refueling and when fuel vaporizes from engines and fuel systems caused by vehicle operation or hot weather.

Controlling Air Pollution from Motor Vehicles - NYS Dept ...

Air pollution. Internal combustion engines such as reciprocating internal combustion engines produce air pollution emissions, due to incomplete combustion of carbonaceous fuel. The main derivatives of the process are carbon dioxide CO 2, water and some soot—also called particulate matter (PM). The effects of inhaling particulate matter have been studied in humans and animals and include asthma, lung cancer, cardiovascular issues, and premature death.

Don't Idle. Unnecessary idling of cars, trucks, and school buses pollutes the air, wastes fuel, and causes excess engine wear. Modern vehicles do not require "warming up" in the winter, so there is no need to turn on the engine until you are ready to drive.

What You Can Do to Reduce Pollution from Vehicles and Engines

2. Pollutants from SI Engine • An internal combustion engine operates by burning of fossil fuels. • Exhaust emission are major contribution to environmental pollution. • If combustion is incomplete, the only products being produce from the exhaust would be water vapor and carbon dioxide.
