`Java ArrayList`. The `ArrayList` class is a resizable array, which can be found in the `java.util` package.. The difference between a built-in array and an `ArrayList` in Java, is that the size of an array cannot be modified (if you want to add or remove elements to/from an array, you have to create a new one). While elements can be added and removed from an `ArrayList` whenever you want.

1. `Java List add()` This method is used to add elements to the list. There are two methods to add elements to the list. `add(E e)`: appends the element at the end of the list. Since `List` supports Generics, the type of elements that can be added is determined when the list is created. `add(int index, E element)`: inserts the element at the given index. The elements from the given index is shifted towards right of the list.
